ACHIEVEMENTS

- Winner of the UN “**World Innovation Day Hackathon 2023**,” organized by Hackmaker. ([see here](#))
- Peer-reviewed research papers of the “**34th Int’l ACM UMAP**” Conference, Sweden. ([see here](#))
- 3x Section Leader at “**Stanford Code in Place**,” taught Int’l students “Python fundamentals.” ([see here](#))
- Participated in 20+ international hackathons as participant, judge, and mentor.
- Got 120 in **Duolingo English Test** (IELTS 6.5 equivalent). ([see here](#))
- Solved 150+ LeetCode problems. ([see here](#))
- Secured **6th position** nationally in Google Code Jam 2023. ([see here](#))
- Qualified to Round 2 of Meta Hacker Cup coding competition 2025([see here](#))
- Ranked 357th worldwide in **UC Berkeley Calico** 2024([see here](#))
- Ranked 129th globally in **MIT Winter Contest**, solved 7 out of 9 questions.([see here](#))
- Competed in Harvard CS50x Puzzle Day in ’23, ’24, ’25, and ’26. Collaborated with an international team, ”solved 9/9 puzzles.” ([see here](#))

EDUCATION

Government College University Faisalabad

BS Computer Science

Punjab, Pakistan

2019 – 2023

CGPA: 3.44 / 4.00

Final Year Project: Smart CPM Parser ([see here](#))

Technologies: Python, Flask, Bootstrap.

- Developed web application automating cargo EDI message processing.
- Enhanced processing rates, improved efficiency, and delivered actionable insights through data visualization.
- Improved efficiency, reduced manual errors, and added real-time logs.

SKILLS

Programming Languages: Python, JavaScript, C/C++

ML Libraries: PyTorch, TensorFlow, Keras, Pandas, NumPy

LLMs / GenAI: LangChain, LlamaIndex, AutoGen, Sentence-transformers, OpenAI APIs

Web: HTML, CSS, Bootstrap, Tailwind CSS, Streamlit

Databases: MongoDB, Pinecone, Vectara

Tools: Git, GitHub, VS Code, Jupyter, Colab, Notebook LLM

WORK EXPERIENCE

Pak Angles

GenAI Instructor

Remote

Jan 2025 – Feb 2025

- Designed curriculum for GenAI advanced workshops
- Delivered lectures to 1000+ students on fine-tuning LLMs for more comprehensive and personalized responses.
- Built an agentic RAG model, utilizing LangChain and sentence-transformers to provide reasoning to the RAG architecture. ([see here](#))

PEER REVIEW EXPERIENCE

34th Int’l ACM UMAP Conference

Technical Reviewer

Sweden

2026

- Reviewed papers on **smart home personalization and structured conversational** benchmarking.
- Evaluated methodology, datasets, **SOTA comparisons**, and ablations analysis. ([see here](#))

INTERNATIONAL HACKATHONS

Hack-Nation AI Hackathon ([see here](#))

LabPilot-AI

Technologies: Next.js, React, Tailwind CSS, Hugging Face API

- Developed LabPilot AI, an MVP that converts scientific hypotheses into AI-generated experiment plans.
- Collaborated in a hackathon setting to rapidly design, prototype, and deliver a functional AI solution.

LangChain x Autonomous GPT Agents Hackathon [\(see here\)](#)
RedAGPT [\(research proposal\)](#)

Technologies: LangChain, Auto-GPT, Redis database

- Developed a novel AI framework utilizing AutoGPT and LangChain for autonomous vulnerability assessment.
- Engineered an interactive evaluation platform to facilitate systematic study of AI-driven approaches.

UN World Innovation Day Hackathon [\(see here\)](#)
VerifAid

Technologies: Oracle Apex, SQL

- Built donation management system to help NGOs securely manage donor request data.
- Collaborated on “SQL” queries to create tables, update database records, and visualize graphs.

TEACHING EXPERIENCE

Stanford Code in Place	CA-USA,Remote
<i>Section Leader</i>	2025 – 2026

- Taught Stanford CS106A Python course to global students.
- Taught console, graphics programming, and ”**control flows**”, helped the students start their programming journey. [\(see here\)](#)

iCodeGuru	Silicon Valley-USA,Remote
<i>Course Trainer / Organizer</i>	2024 – Present

- Taught DSA and OOP in Python to underrepresented students.[\(see here\)](#)
- Organized 50+ webinars on Global Competitions for more than 20 Pakistani universities.

ACADEMIC PROJECTS

DynPercept[\(see here\)](#)

Technologies: Python, Jupyter Notebook, Colab, NumPy, Pandas, Matplotlib, PIL

- Designed a reproducible experiment to compare static and dynamic visual encodings for angle perception.
- Implemented ground-truth extraction, dynamic frame generation, and custom MLAЕ-based evaluation.

NeuroScanAI- Brain Tumor Detection System[\(see here\)](#)

Technologies: PyTorch, MobileNet, CNN, Streamlit, Hugging Face Spaces, Grad-CAM

- Trained a brain tumor MRI classifier with a custom and MobileNet architecture, achieving **98% validation** accuracy.
- Implemented **Grad-CAM explainability** to visualize model attention regions for clinical interpretability.

Efficient CLIP Distillation [\(see here\)](#)

Technologies: PyTorch, OpenAI CLIP, ViT-B/32, Contrastive Learning, CUDA

- Distilled a lightweight student CLIP model from a larger teacher for efficient multimodal retrieval.
- Developed contrastive training and text–image alignment methods to produce stable embeddings.

LEADERSHIP EXPERIENCE

lablab.ai	Sweden-Remote
<i>Technical Mentor</i>	2023 – 2024

- Provided guidance to teams for “integrating external functionalities” into their hackathon projects.
- Evaluated projects, and code to select the most impactful submission.[\(see here\)](#)

iCodeGuru	Remote
<i>Hackathon Lead Organizer</i>	2024

- Led workshop on Vectara HHEM [\(see here\)](#)
